

**Purdue is growing
Indiana's economy.**

Purdue professors and students are using molecular genetics to cut the growing time of Indiana hardwoods by as much as a decade.

And the result is more Hoosier hardwoods for Indiana manufacturers, 56,000 Indiana jobs and sustainable Indiana forests for generations to come.

That is good news for an Indiana industry worth more than \$5 billion each year.

Purdue foresters are more than Boilermakers. They're treemakers, jobmakers and businessmakers. And they're helping Indiana's economy grow.

Treemakers. Jobmakers. Boilermakers.
