Forestry Moves to School of Agriculture

John Skinner
Dean of Agriculture

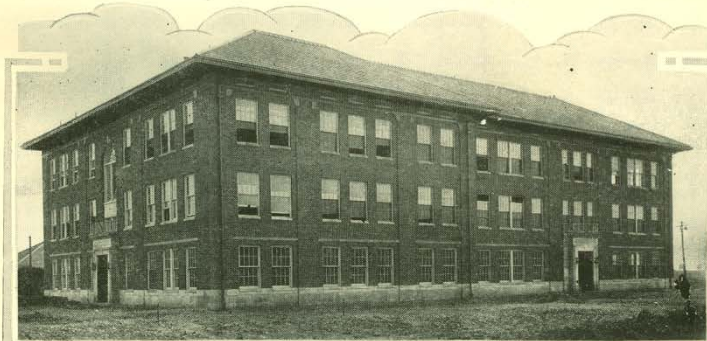

Laurenz Green
Chief in Horticulture

The Horticultural Building

The Horticultural Building contains approximately 25,000 square feet of floor space. It contains class rooms and laboratories for resident teaching, laboratories for experiment station work, and offices for the extension, station and teaching staffs.

Some of the special features are a modern refrigeration plant and cold storage rooms for the preservation of fruits for class room, a spray machinery laboratory where modern spray machinery for the use of all classes of horticulturists will be maintained, a fruit packing laboratory where students will be taught the grading and packing of fruits, a spray materials laboratory where students in horticulture learn the proper way to mix modern spray materials, a canning and by-products laboratory in which important lines of investigations and the teaching of students will be done, a drafting laboratory where all students in Horticulture will learn something of the preparation of plans for landscaping home grounds and public properties, and incidentally to appreciate the beauties of Indiana landscaping.

Horticultural Building, Purdue University. Dedicated to the service of Indiana Horticulture November 11, 1926.

Summer Field Practicum Initiated in 1926

- Acting State Forester Wilcox wrote to Burr Prentice:
 - “Your graduates are seriously handicapped both as applicants for positions and as Foresters entering the practical field by their having very little actual Forestry experience.”
- Prentice made Skinner, Ag Dean, aware of this issue who in turn informed President Elliott, noting that
 - “[o]ne of the greatest weaknesses of the students in Forestry that have been turned out of this institution in the past has been the lack of practical knowledge of Forestry. It is deemed desirable and essential that they get this in a camp established for freshmen. All the more prominent institutions offering Forestry have summer camps for Forestry students.”
- Elliott and Trustees again supported Skinner’s request.
 - All entering freshmen starting in 1926 were required to attend an eight-week summer forestry camp established in the Clark State Forest, Henryville, Indiana in cooperation with the Indiana Division of Forestry.

1930

Forestry Extension Program Initiated

1930

Burr Prentice asked by Dean if forestry students should be awarded BS or BSF degrees. He choose BSF setting the foundation for forestry as a professional program.

Undergraduate enrollment
peaked at 666

First Earth Day
April 22, 1970

1977 Camp Returns to Southern Indiana

- Lost Lake Camp no longer suitable
 - Inadequate capacity
 - Structures would have required over \$1 million of improvements to remain usable
 - Some sentiment in Indiana forestry and wood products sectors to train students in Indiana

Branchville YCC Camp

- Leased from US Forest Service, Hoosier N.F.
 - YCC program terminated
 - Minor improvements in facilities required

1978
Conclave
4-H Center

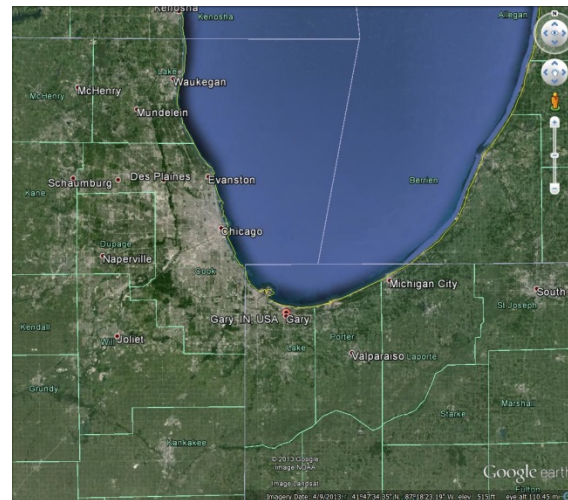

1982

Illinois-Indiana Sea Grant program established

Research and extension on Illinois and Indiana Lake Michigan shoreline , fisheries, watersheds, water quality, etc.

Google Earth, accessed 9/17/2013

1983
Conclave

1982 - Back to the North Woods

- Lost Lake Camp again leased from U.S. Forest Service
- Adequate repairs made to “get along”

1985 to 1989: University of Michigan's Camp Filbert Roth on Golden Lake

- Had to give up on Lost Lake Camp
 - US Forest Service required facility improvements for renewal of lease.
- UM Camp allowed use of same tracts for most field exercises

1990 to Present: Covenant Point Bible Camp and Retreat Center,

- UM camp property closed completely in preparation for sale of property.
- Covenant Point (CP) also allowed use of most of same tracts.
- CP facilities fairly modern, new buildings added to accommodate our program
