

## RADIO TELEMETRY AS A RESEARCH TOOL

On the map, mark the location of the rabbit each time you play the simulation.

Draw a circle around the area you think the rabbit uses as a home range.

Then, using the information you have gathered, answer the questions below.

### QUESTIONS:

**Are there any patterns to the rabbit's locations?**

*Yes, it tends to be found in the meadow and along edges in between the meadow and other habitats where it might find food or water.*

**Where do you think the rabbit's nest might be located?**

*Because of the multiple sightings in that area, the nest may be in the southeast section of the meadow.*

**Is there anything else that you can conclude from your observations?**

*(This one is open for class discussion.)*
